

## **Advantages of distributed ledgers: Reduce operational inefficiencies**

### ***Reduction***

Blockchains will increase operational efficiency, whether that is reducing cost, time, or errors. They will cut friction in business processes that stretch across organizations which require so many checks and balances. This will create increased visibility to a business and its ecosystem by improving auditability, compliance, and transparency. Blockchains will increase security and privacy of data, especially when used with cryptographic techniques patented by TruDoss.
